

Kitchen Week — User Guide

How to use the app day to day: checklists, signing off, bookings, messages, printing, and the manager-only tools.

Contents

- | | |
|--------------------------------|---|
| 1. Logging in | 11. Collapsing sections |
| 2. Finding your way around | 12. Bookings |
| 3. Notice Board | 13. Messages |
| 4. How are we doing? (mock-up) | 14. Change My PIN |
| 5. Handover (in and out) | 15. Printing |
| 6. Morning cleaning | 16. Marking the day complete |
| 7. Prep | 17. Ending the week (and undoing it by mistake) |
| 8. Weekly cleaning | 18. Records |
| 9. Defrost | 19. For managers: the Settings tables |
| 10. Daily closedown | 20. Troubleshooting |
-

1. Logging in

At the top of the app is a bar that says either **Not logged in** or **On shift: [your name]**.

- Tap **Log in**, pick your name from the list, and enter your PIN.
- You stay logged in on that tablet — ticking off jobs, signing things, adding notes — until someone taps **Switch user** and logs in as themselves instead.
- If your name isn't in the list, ask a Kitchen or General Manager to add you under Settings → Users.

You don't need to log in just to *look around* — only to tick something off, sign something, or post something.

2. Finding your way around

Across the top: **Mon, Tue, Wed, Thu, Fri, Sat, Sun**, then **Messages** and **Change PIN**, then — set apart with a gap, since they're not day-to-day tools — **Settings** and **Records**, and finally a **User Guide** link, which opens this document as a PDF.

- The day tabs open that day's checklists.
- **Messages** — see section 13.
- **Change PIN** — see section 14.
- **Settings** is where pars, staff, and settings live (see section 19 — most people won't need this).
- **Records** holds every week that's been filed away.
- **User Guide** opens this guide in a new tab — handy for looking something up without leaving the app or needing your own copy.

On each day's page, a row of coloured chips (Morning, Prep, Weekly, Defrost, Closedown) jumps you straight to that section — handy once the page gets long.

3. Notice Board

At the very top of every day is the **Notice Board** — for things *everyone* should know, not just the next shift: a fridge that's down, a delivery running late, anything worth flagging. It stays there until a manager removes it, and it's the same board on every day, not reset daily.

Only a Kitchen or General Manager can post or remove one (you'll be asked for that PIN if you try) — but anyone can read it. A notice can include a photo: tap **Add photo** when posting, and it shows as a thumbnail on the notice afterwards — tap the thumbnail to view it full-size.

4. How are we doing? (mock-up)

Below the Notice Board is a **How are we doing?** card with three tiles — KMS, NPS, and Food Quality — shown as percentages. This is currently a mock-up for gathering feedback: the numbers are placeholders, not real data, and it's clearly marked **"Work in progress."** If it moves beyond a mock-up, it would pull real figures in from elsewhere (e.g. Power BI) rather than showing fixed numbers.

5. Handover (in and out)

Handover from [previous day] — near the top of the page — shows anything left unfinished from the day before, plus any notes the previous shift left you. Tap **Read & understood — sign as [your name]** to acknowledge it (you'll need to be logged in).

Handover to [next day] — near the bottom — is where you leave notes for whoever's on next: low stock, a fault, a booking to know about. Type your note and tap to add it; it'll show up at the top of the next day automatically.

6. Morning cleaning

A simple checklist. Tick a job off as it's done — it stamps your name and the time automatically, no need to type initials. Some jobs have an **i** next to them with extra detail or a reference photo — tap it to see more.

7. Prep

A table of what needs to be ready for the day: item, unit, par (how much you need), how much you've got, and how much still needs making. Type what you've got into **Have** and the **To make** column works itself out. Tick **Done** once it's made.

Items marked **task** instead of a quantity are one-off jobs rather than a count.

8. Weekly cleaning

Shows just today's weekly job(s) — the rota is spread across the week so it's not all on one day. Tick it off the same way as morning cleaning.

If a task has a small teal **"Sign off in Trail"** badge next to it, that job also needs logging in the Trail app separately — ticking it here doesn't do that for you.

9. Defrost

For each item: how much should be defrosted today (**Defrost level**), what's already out (**On line + Back up**), and how much more is needed. Fill in what's on the line/in back-up and the **Needed** column calculates itself. Tick **Out** once you've pulled it.

Each day has a small coloured **day dot** shown near the top of this section (Mon = blue, Tue = yellow, Wed = red, Thu = brown, Fri = green, Sat = orange, Sun = black) — anything taken out today should be dated or dotted with that colour, so it's obvious at a glance which day something came out of the freezer.

Once everything that needs pulling has been pulled, tap **Sign** under **Defrost completed by** to stamp who finished it.

10. Daily closedown

The end-of-day checklist. Tick jobs off the same way as elsewhere. There's also:

- A closing question (usually about fridge temperatures) — type the answer.
 - **Closing chef initials** — tap **Sign** (needs you to be logged in).
 - **Team leader initials** — tap **Team leader sign-off**. This always asks for a Team Leader (or Kitchen/General/Deputy Manager or Kitchen Team Leader) PIN on the spot, regardless of who's logged in on the tablet generally — it's a deliberate double-check.
-

11. Collapsing sections

Each section (Morning, Prep, Weekly, Defrost, Closedown) has a ▼ **Hide** / ► **Show** button in its header. A section collapses itself automatically once everything in it is done, so the page gets shorter as you work through the day. Tap the button to reopen a collapsed section, or to tuck an unfinished one out of the way early if you want.

12. Bookings

If a booking system link has been set up (see section 19), every day's page gets an **Open [Day]'s bookings** ↗ button. It opens that exact date's run sheet in your real booking system (e.g. DesignMyNight) in a new tab — a genuinely live link, not a snapshot — so you may need to log in there if you're not already, same as opening it directly would be.

13. Messages

If a Kitchen/General/Deputy Manager or Kitchen Team Leader has left you a message, it pops up automatically the next time you log in anywhere in the app — you don't need to go looking for it.

You can also check message history any time from the **Messages** tab:

- **My Messages** — tap your name, enter your PIN, and see your last 5 messages, most recent first, whether or not you've already seen them — handy if you've forgotten what one said.
 - **Leave a Message** — tap **Unlock** and enter a manager PIN to reveal the composer: pick anyone with a PIN, write a note, and it pops up for them next time they log in. What's still queued (not yet seen) is listed underneath with a **Cancel** button, in case you change your mind. Tap **Lock** to hide it again. Only a manager PIN can open this part — anyone can check their own messages, but only a manager can see what's queued for other people or post something new.
-

14. Change My PIN

In the **Change PIN** tab (next to Messages), tap your name, enter your *current* PIN to confirm it's you, then set a new 4-digit one. Same rules as everywhere else PINs are set: exactly 4 digits, and it can't already belong to someone else — you'll be told if it's taken so you can pick another. Anyone with a PIN can do this for themselves, no manager needed — staff, team leaders, or any of the manager roles.

15. Printing

- **Print this day**, at the bottom of the page, prints the whole day.

- **Print prep list** and **Print defrost list**, in those sections' headers, print just that one list on its own — handy for handing to a prep cook or sticking by the fridge.
 - Under **Records**, **Print cleaning & closedown checks** prints Morning cleaning, Weekly cleaning, and Daily closedown checks for a *whole week* in one go — Monday to Sunday, each day starting on its own page. It's available for the current week and for any filed week in Records, so past weeks can be reprinted just as easily.
-

16. Marking the day complete

At the bottom of the day is **Mark [Day] complete**. This doesn't lock anything or stop you editing — it's just a flag so the day's tab shows a tick, useful for a quick glance at what's outstanding across the week.

17. Ending the week (and undoing it by mistake)

Under **Records**, **End week & start a fresh one** files the current week away and opens a blank set of sheets for the new week. It downloads a CSV backup automatically first, and nothing is deleted — the finished week is fully preserved in Records.

If this gets tapped by accident: go to Records, find that week under **Filed weeks**, and tap **Restore as current week**. Whatever's currently on the live sheets gets filed away too before the swap, so nothing is lost either way.

18. Records

Every filed week is listed with buttons to:

- **Summary** — a quick read-only overview.
 - **CSV / File** — download a spreadsheet or a full backup file.
 - **Print cleaning & closedown** — see section 15.
 - **Restore as current week** — see section 17.
-

19. For managers: the Settings tables

Tap **Settings** and enter a PIN to unlock it.

- **Kitchen Managers**, **General Managers**, **Deputy Managers**, and **Kitchen Team Leaders** all get full access — every section below, and their PIN also works as a sign-off anywhere in the app (chef, team leader, defrost, handover) if needed. All four work identically; they're kept as separate named lists just so it's clear who holds which title.
- **Team Leaders** only see **Staff** and **Bookings** when they unlock it — the two sections marked (*Team Leaders too*) below.

Whoever unlocks it, their name and access level shows at the top, next to **Lock settings**. Everything below is organised the same way it appears on screen, top to bottom. To keep the quick-jump chips at the top of the page from getting cluttered with six near-identical entries, all the people-management sections below (bar Team Leaders' own sign-off list) share one **Users** chip rather than each getting their own — the sections themselves are all still there, just reached via one shared link.

Morning cleaning

A note field at the top (shown above the checklist on every day page), then a table of jobs — one row each. Per job: the task name, a fixed method (or leave that blank and fill in the day columns instead, for a job whose method changes day to day), a note, a reference photo, and a value for each day Mon–Sun (used when the method varies by day rather than staying fixed). **Add morning cleaning job** adds a new row; **Delete** removes one.

Defrost pars

One row per item: name, a note shown under it on the day page, how it's counted (the unit), a reference photo, and a defrost level for each day of the week — that's the number staff are working towards when they fill in On line + Back up. **Add defrost item** / **Delete** manage the list.

Prep pars

Same shape as Defrost: name, a detail/recipe note shown when someone taps the **i** on the day page, unit, photo, and a target quantity for each day. **Add prep item** / **Delete** manage the list.

Weekly cleaning rota

Grouped by day (Monday through Sunday) rather than one flat list, since the rota is spread across the week. For each day: a box for the task text, a box for an optional note, an **"Also needs signing off in Trail"** checkbox (turns on the badge described in section 8), and a photo. **Add task for [Day]** adds a row under that day. A footer note at the bottom shows underneath the weekly cleaning list on every day page.

Daily closedown list

One row per task, with four separate boxes — task name, a short method, a longer detail shown when someone taps the **i**, and a note — plus a photo. **Add closedown task** / **Delete** manage the list. Underneath the table is the **closedown question** field (the wording asked at the bottom of every day's closedown, usually about fridge temperatures).

Kitchen Managers / General Managers / Deputy Managers / Kitchen Team Leaders

Four separate lists, each just a name and a PIN per person. Anyone on any of the four has full Settings access and can sign off anything elsewhere in the app, as described at the top of this section — they're kept as separate lists purely so it's clear who holds which title, not because they behave differently. Add or remove people freely here — there's a safeguard stopping the very last person across all four lists combined from being removed, so nobody accidentally locks everyone out of Settings.

Staff (*read: added here, but this list is what Staff login uses*)

Name and PIN per person, used for the everyday login (section 1) and for signing chef/defrost/handover items. This is the one section Team Leaders can also reach.

Team Leaders

A separate name-and-PIN list from Staff, used only for the team leader sign-off at closedown (and for unlocking Settings at the "Team Leader" level). Keeping it separate means the closedown sign-off always checks a real team leader's own PIN, rather than whoever happens to be logged in generally. Only a Kitchen/General/Deputy Manager or Kitchen Team Leader can add or remove people here.

Bookings (*Team Leaders too*)

One field: the base link to your booking system's run sheet (e.g. from DesignMyNight), everything up to but not including the date. Settings shows a live preview of what today's link would resolve to, so it's easy to check it's right. This is what builds the **Open [Day]'s bookings** button described in section 12 — nothing is uploaded or stored here, it just constructs a link.

Advanced

- **Download settings** — a full backup file of everything above.
- **Restore settings from file** — load one of those backups back in, overwriting what's currently set up.
- **Reset to original sheets** — wipes all of the above back to the app's built-in defaults. Used rarely, and worth being sure before tapping it.
- **Shared database** — if this kitchen uses one, the password every tablet needs to enter once so they all read and write the same data.

Leaving a message for someone is no longer here — see section 13, it moved to its own **Messages** tab.

20. Troubleshooting

- **"Not showing" after an update** — the app updates itself automatically once it's redeployed; just do a hard refresh (or close and reopen the tab) if something seems out of date.
- **Wrong PIN keeps happening** — PINs are checked exactly, including leading zeros; ask a Kitchen/General Manager to check what's saved under Settings.
- **Accidentally ended the week** — see section 17, it's fully recoverable.
- **A section won't stay open/closed** — tap its Hide/Show button again; your choice is remembered until it's tapped once more.

- **Data only on one tablet** — if the top-right doesn't say synced, this kitchen likely hasn't set up the shared database yet; that's a one-off setup step for whoever deployed the site (see the separate Deployment Guide).
